Introduction

Self taught passionate web developer with a thirst for knowledge. Able to solve problems with whatever limited resources I have. Comfortable wearing many hats at work.

I have been working as a freelance web developer for the last 10 years. During this time I worked in the internet marketing and blogging field as a blogger and web developer. I expanded my skills from WordPress to Node.js and React.js. I am a quick learner, and I love working with JavaScript based custom web applications.

Technical skills

- | | | |
|--------------|-------------------------|---------------------|
| ➤ Node.js | ➤ HTML, CSS, JavaScript | ➤ Blogging |
| ➤ React.js | ➤ WordPress Themes | ➤ Content Marketing |
| ➤ Express.js | ➤ PHP | ➤ SEO |
| ➤ MongoDB | | |

Career summary

June 2009 - May 2017

**WordPress Theme Developer & Customizer
Freelance/Upwork**

Outline

I customized existing WordPress themes (mostly the Thesis Theme) for clients. My primary task was to code a unique design for each of the business sites within tight deadline. This helped me grow my front end skills.

Key responsibilities

- I started with a blank canvas and worked my way up to a fully custom design
- I coded the design mostly in CSS for the customization jobs

- Made custom WordPress themes using HTML, CSS and PHP
- Delivered on time and helped business owners make better marketing decisions

Key achievement

- I developed a free theme for the WordPress theme directory
<https://wordpress.org/themes/blogkori/>

June 2008 - May 2017

BlogKori.com

Blogger

Outline

I blogged about blogging and internet marketing. I started writing before social media was popular. It helped me a lot to learn internet marketing, web development and improve my English skills.

Key responsibilities

- Constantly coming up with new content ideas and growing an audience
- Designing and developing my own website
- Learn and practice various internet marketing tactics

Projects

Twitter MVC app clone

Overview

A basic twitter clone MVC application I made with Node.js

Technology used

Node.js, Express.js, MongoDB, HTML, CSS
